Subject:

Laboratory Data Reports for Pond Sediment Sampling

Atlantic Steel Facility
Atlanta, Georgia

Law Environmental Job No. 55-0765

Dear Mr. Mowrey:

Law Environmental is pleased to present the results of sampling and analysis of sediments from the middle pond at the Atlantic Steel Site. This letter presents a brief description of the field work, analytical results, and conclusions. These services were part of a scope of work outlined in our Proposal Number 55-0364. The work was authorized by Mr. C.A. Harmon in a meeting with Law Environmental personnel on February 7, 1991.

These activities were conducted to assess the potential for migration of contaminated runoff from the National Smelting and Refining Industries (NSRI) site to the Atlantic Steel lower pond.

Pond sediments were sampled on February 7, 1990 and analyzed for total lead (EPA method 7420). Results of sampling in the lower pond were reported in a letter to you dated February 5, 1991.

Mr. Bob Mowrey February 15, 1991 Page 2

FIELD WORK

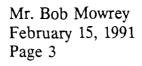

Three samples (SS-11 through SS-13) were collected from the middle pond near the outlet to the lower pond (see Figure 1). The samples were collected by wading into the pond and using a 5-foot long sampling device with a plastic insert. The sampler was driven into the pond sediment and slowly removed. The amount of recovery ranged from 0.5 to 2.0 feet.

At each sampling location, the recovered pond sediment sample was placed in a stainless steel bowl, mixed, and then placed in an appropriate sample container. The samples were placed in a laboratory sample shipper and transported under chain-of-custody to Law Environmental National Laboratory in Kennesaw, Georgia for laboratory analyses.

RESULTS OF THE ANALYSES

Laboratory results from the sampling event are provided in the attached laboratory data report. Concentrations of total lead from this sampling event and two prior sampling events from the lower pond are summarized below in milligrams per kilogram (mg/kg).

| Sample No. | Lead, Total (mg/kg) | | | | | | |
|-------------|---------------------|--|--|--|--|--|--|
| Power Pond | | | | | | | |
| SS-2 | 2200 | | | | | | |
| SS-3 | 1900 | | | | | | |
| SS-4 | 2400 | | | | | | |
| SS-5 | 1000 | | | | | | |
| SS-7 | 560 | | | | | | |
| SS-8 | 3300 | | | | | | |
| SS-9 | 540 | | | | | | |
| SS-10 | 150 | | | | | | |
| Middle Pond | | | | | | | |
| SS-11 | 40 | | | | | | |
| SS-12 | 270 | | | | | | |
| SS-13 | 82 | | | | | | |

CONCLUSIONS

The laboratory results indicate lead levels in the sediments near the outlet of the middle pond are significantly lower than lead levels found in the lower pond. It is therefore unlikely that sediments in the middle pond have contributed to the elevated lead levels found in the lower pond. The most obvious source for elevated lead in the lower pond sediments is the storm drain that originates upgradient at/near the NSRI site.

We appreciate the opportunity to provide services to you on this project. If you should have any questions regarding this letter or the project in general, please call.

Sincerely,

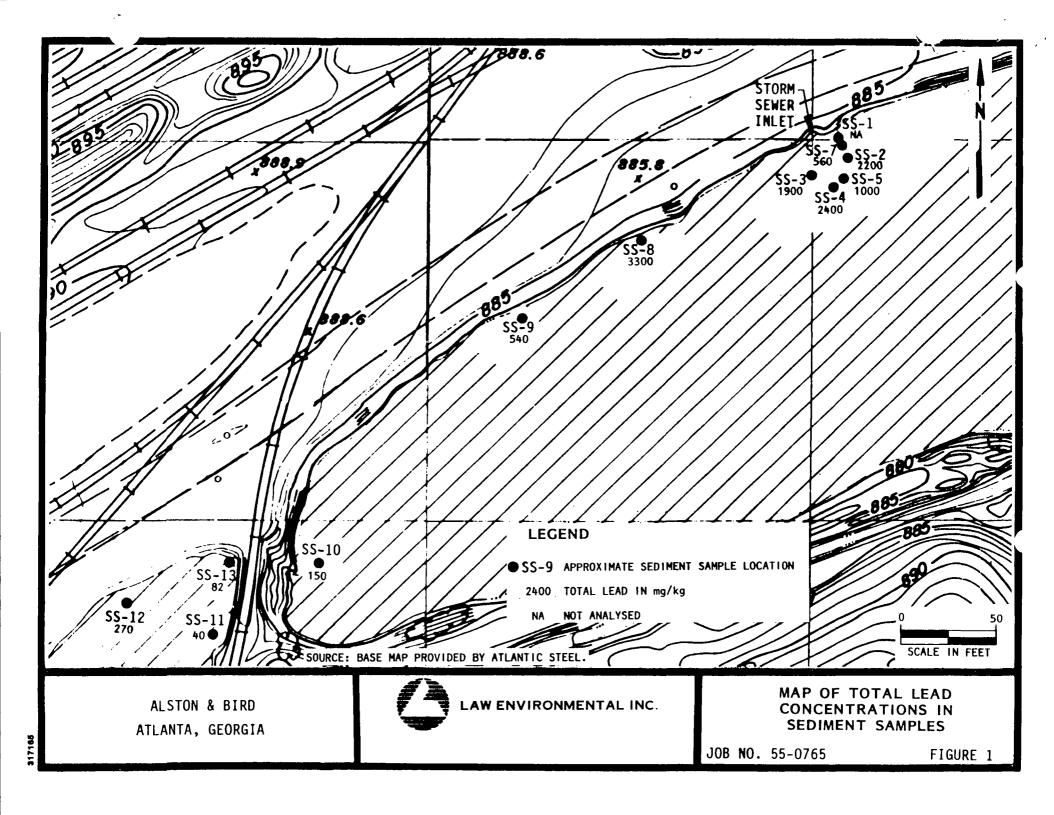

John M. Callaham Project Geologist

Larry A. Neal, P.E.

MEMORANDUM

February 1, 1972

TO:

Ed Sams

Grover Day

FROM:

Bill Burdett

The following pH results were compiled January 31, 1972, from grab samples collected in the 36 inch storm sewer below National Lead Company.

| TIME | <u>рн</u> | METHOD USED TO DETERMINE PH |
|------|-----------|--------------------------------|
| 1000 | 4.4 | pH meter at W.P.C. Laboratory |
| 1030 | 4.0 | pH tape in field |
| 1100 | 0.0 | pH tape in field |
| 1130 | 2.1 | pH meter at W.P.C. Laboratory |
| 1300 | 2.6 | pH meter at W.P.C. Laboratory |
| 1330 | 2.0 | pH tape in field |
| 1400 | 2.7 | pH meter at W.P.C. Laboratory |
| 1430 | 0.0 | pH tape in field |
| 1500 | 1.6 | pH meter at W.P.C. Laboratory |

CITY OF ATLANTA

DEPARTMENT OF PUBLIC WORKS / INDUSTRIAL WASTE 2640 Jonesboro Road, S.E. / Atlanta, Georgia 30315

February 22, 1972

Mr. W. H. Granger National Lead Company 400 Bishop Street, N. W. Atlanta, Georgia 30318

Dear Mr. Granger:

This is to confirm the visit by Mr. Carl Jones and me on February 15, 1972.

At that time, we discussed the damages resulting from the low pH effluent generated by the National Lead battery destruction operation.

Approximately six hundred (600) feet of concrete storm sewer has been severely damaged by the acid waste from this operation. Repairs to the sewer are now underway and the cost of these repairs will be the responsibility of National Lead Company.

Samples collected throughout this month indicate that the pH of the plant effluent runs constantly below the lower acceptable pH limit, as set forth in Chapter 33, Article 1, Section 33-39, Paragraph F, of the City of Atlanta Code of Ordinances. (See Page 4 of booklet enclosed)

The total process flow from the plant now appears to run through a cast iron pipe, the invert of which seems to have been gone for many years.

A check on the flow through this line has given the horrifying results of a pH as low as 0.6 and no higher than 1.7 during two days.

It is essential that immediate temporary corrective action be taken to bring the pH level within our acceptable limits, in order to avoid further sewer destruction within the storm sewer now accepting the industrial effluent.

Area Code 404/627-0477

A plan to permanently abate this illegal discharge must be submitted to the Industrial Waste Section within thirty (30) days from the date of this letter, after plans have been approved, there will be a maximum of thirty (30) days to accomplish the required changes.

I will expect to hear from you within the week in regard to temporary pH control.

Sincerely,

W. C. Burdett

W. D. SMITH Manager

March 7, 1972

Mr. W. C. Burdett Industrial Waste Section Water Pollution Control Facilities City of Atlanta 2640 Jonesboro Road, S.E. Atlanta, Georgia 30315

Dear Mr. Burdett:

This will acknowledge receipt of your letter of February 22, 1972 to Mr. W. H. Granger, Superintendent of our plant at 400 Bishop Street, in which you allege damage to a concrete storm sewer due to excessively low pH of plant effluent.

Subsequent to your February 15, 1972 visit, we undertook an extensive investigation of our plant in relation to the storm sewer and the following appears:

Under normal circumstances two (2) types of water are discharged - non-contact cooling water and storm water.

The non-contact cooling water is well within the pH limits prescribed and it is this type of water that is normally directed to Atlanta's storm water sewers by our plant.

Process water - water that comes in contact with raw materials - is not discharged into either of the City's sewerage systems. Rather, it is disposed of in another manner so as to prevent any injurious effect to the sewerage systems.

Thus from the foregoing, it would appear that any water discharged into the sewerage systems could only have had an acceptable pH value.

However, in the course of our investigation it was found there may have been some leakage from our waste collection system that would have mixed with cooling water flowing to the City's storm system.

We find it hard to perceive that the possible leakage when mixed with the cooling water would result in damage to the extent alleged.

We have stopped the sources of objectionable leakage. Our engineers are presently evaluating alternate concepts of facilities that will eliminate the possibility of objectionable discharges entering the City system. We would expect to complete this evaluation and establish a design plan by May 2, 1972 and will be pleased to present our plans for your review on that date.

In view of the foregoing, we must at this time take under advisement your statements that damage was caused by our discharges, that "cost...of...repairs will be the responsibility of National Lead Company", and that any discharges are "illegal".

We are quite concerned with the allegations you have made and have undertaken the investigation and action as noted above. Please be assured of our sincere efforts to the end that this matter be concluded to the best interests of all concerned.

Yours very truly,

N L INDUSTRIES, J

W.D. Smith

Mr. W. H. Granger National Lead Company 400 Bishop Street, N. W. Atlanta, Georgia 30318

Dear Mr. Granger:

This is to advise that repairs to the Bishop Street Storm Sewer, which was damaged by your battery destruction operation, have been completed at a cost of \$5,265.

Pursuant to a letter to you dated February 22, 1972 from Mr. W. C. Burdett of the Industrial Waste Section of the Public Works Department, this is to advise that the cost of these repairs is the responsibility of National Lead Company. Please forward a check payable to the City of Atlanta in the amount of \$5,265 to the undersigned at your earliest convenience.

I am attaching herewith a copy of the requisition to Pressure Concrete Construction Company of Florence, Alabama which authorized this expenditure.

Yours truly,

PELHAM C. WILLIAMS

W. D. SMITH Manager

June 7, 1972

Mr. P. C. Williams, Director Public Works Department City of Atlanta 303 City Hall Atlanta, Georgia 30303

Dear Mr. Williams:

This will acknowledge receipt of your letter of April 3, 1972 wherein you conclude in substance that, damage to the Bishop Street storm sewer was caused by N L Industries, Inc. Atlanta facility and that, the cost of repairs is the responsibility of N L Industries. Apparently, you have ordered and completed certain repairs since your letter demand the payment of \$5,265.

In our letter of March 7, 1972 to Mr. W. C. Burdett of the Industrial Waste Sections of the Public Works Department, we indicated that we were investigating the allegations of sewer damage, and would take under advisement the allegations as to responsibility for damage and liability for cost for sewer repairs. At this time, we reaffirmed that an investigation into damage and any casual connection is being pursued. However, in view of your letter of April 3, 1972, we must take a stronger position as to responsibility for damage and liability for cost of these sewer repairs. Thus, at this time we must deny any responsibility for damage to the sewer system; nor can we agree to accept liability for the cost of any repairs to the sewer system.

We are at a loss to understand your position in this matter as we at no time entered into a contract with anyone for the repair of sewers. Nor did we authorize the City to act as agent for N L Industries in such a contract. In fact, we were not consulted with the exception of your two (2) letters; thus we find it difficult to perceive how we can be responsible for the repair bill of \$5.265.

Perhaps in an attempt to secure a better understanding of the facts in general and the City's reasoning as to our liability for the repairs in particular, we could arrange a meeting with your personnel in interest. If you feel this would be beneficial, please contact us.

Yours very truly,

N L INDUSTRIES, INC.

Manager

DEPARTMENT OF PUBLIC WORKS / INDUSTRIAL WASTE 2640 Jonesboro Road, S.E. / Atlanta, Georgia 30315

June 23, 1972

Mr. W. D. Smith, Manager N L Industries, Inc. Metal Division Box 7008, Station C Atlanta, Georgia 30309

Dear Mr. Smith:

Reference is made to your letter dated June 7, 1972, in which you deny any responsibility for damage to the Bishop Street Storm Sewer; nor accept liability for cost of repairs to the sewer.

After considering the damage to the storm sewer and the accrument of evidence, by the Industrial Waste Section, pertaining to the effluent from N L Industries I feel that the Public Works Department has in no way acted prematurely in establishing the responsibility for damage and liability upon N L Industries.

I will have Mr. W. C. Burdett, of the Industrial Waste Section, contact you and arrange a meeting with N L representatives in order to clarify the City's position on this matter.

Sincerely,

Pelham C. Williams

OFFICE MEMORANDUM

TO: FILE

DICTATED BY BILL BURDETT ON AUGUST 17, 1972

SUBJECT: Bishop Street Storm Sewer Repairs - City Hall Office of Water Pollution Control

A meeting was held in Ed Sams office on Thursday August 17, 1972 to review the facts and reasoning for establishing the responsibility and liability for sewer damage on National Lead Industries. Those persons attending this meeting was as follows:

- 1. W.P.C. Division Bill Burdett
- 2. Sewer Division Ray Allgood
- 3. City Attorney's Office Henry Murff
- 4. N L Industries Bill Smith
 Larry Griffin
 Bill Mann
 John Stetson

The gist and content of this meeting is outlined as follows:

- 1. At the outset of the meeting, a plat was introduced showing the location of the subject sewer and the surrounding area.

 Ray Allgood identified the sewer, its collection points and the point of discharge into the Atlantic Steel pond.
- 2. Mr. Mann was interested in the length of time the sewer had been in use and if this deterioration was possibly from normal wear. Ray Allgood attested definately that concrete pipe would wear due to normal friction, but deterioration of the magnitude in this line could have only be caused by a chemical agent. At this time pictures were submitted to illustrate the extent of damage in the line.
- 3. Mr. Mann posed the question: that possibly there was an industry other than National Lead that might have contributed the damaging waste to the sewer system. I explained that an inspection by the Industrial Waste Section revealed that National Lead was the only industry in the sub-drainage basin, served by the Bishop Street Storm Sewer, that produced waste capable of destroying concrete pipe and that the storm line above the drop inlet where National Lead flow enters the line was in good condition.
- 4. Mr. Mann requested a more thorough explanation of costs involved in the repair. George Pace was summoned and he explained the procedure followed by the City in acquiring bids for the sewer repair. Eventually awarding the lowest bidder the job.

George also explained that other costs involving work above and beyond normal operations by city crews was involved, but that cost was not included in the \$5,265 statement to National Lead. Mr. Mann agreed that the actual work by the contractor should be the only amount billed.

- 5. Mr. Mann requested a thirty (30) day period to study and investigate more thoroughly the costs incurred in this type of repair to determine if the Citys charge was equitable. September 14, 1972, was set as the final date for a reply by National Lead and the meeting was concluded.
- 6. I expect National Lead to reply with an offer to pay approximately 60% of the \$5,265 statement submitted. Contending that 40% of the damage was from normal friction wear. Any offer other than the total cost should be flatly rejected.

MEMORANDUM

TO: File

FROM: Bobby Hadden REH

SUBJECT: Inspection of Industrial Discharge at N.L. Industries:

10:15 A.M.

Carl Jones and I went to N.L. Industries to take pictures of sewer damage. We found the following conditions and/or violations of the City code.

- 1. pH of the discharge pipe located approximately ½ way down concrete wall on southeast side of property. This waste proceeds to corrugated metal pipe into concrete pipe under Mecaslin St. at railroad. Believe these sewers belong to r/r. However, waste eventually ends up in the combined sewer system. Invert of corrugated pipe is completely deterioated. Before reaching the corrugated pipe this waste mixes with what appears to be cooling water resulting in a pH of 4.
- 2. pH of the discharge point on the southwest side of their property. This waste was coming from the north fiberglass tank through a leaking pipe joint. Appeared to be residue of sulfuric acid left in tank after rupturing last week. There was approximately 8" 12" in the bottom. Also the storm basin had a pH of 10, however, this wasn't enough to neutralize the acid. These waste combined in the trough and emptied on the ground and flowed to the manhole at the corner of their property.

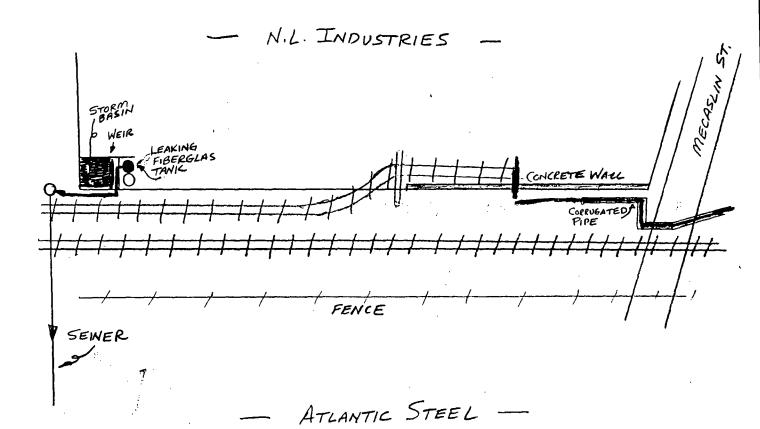

Mr. L. H. Malone was informed of conditions. He immediately neutralized the waste in the fiberglass tank with soda ash. He was then going to correct the other discharge.

* Subsequent investigation revealed that this waste eventually discharges into the open channel below the decring Rd interceptor and does not enter the sanitary sewer. REH

November 21, 1977

Mr. L. H. Malone Area Production Manager N.L. Industries Box 7008, Station C Atlanta, Georgia 30309

Dear Mr. Malone:

This is to confirm our meeting on November 15, 1977, and state the City of Atlanta's position concerning your industrial waste into the sewer system. Others attending were Gary Gorman and Steven Weaver of N.L. Industries and Carl Jones of the City of Atlanta.

Enclosed is a copy of the "Standards of Acceptability of Industrial or Trade Wastes For Admission Into Sewers Of The City of Atlanta." Below is a list of the violations we have found on recent visits:

- (1) The conditions of your pH control system was deplorable. Both fiberglass tanks were ruptured and not serviceable. The pH recorder module was missing from the control panel. Most of the metal piping and valves were badly corroded. (See 33-43 on page 7 of enclosed booklet.)
- (2) On November 11, 1977, we found excessive concentrations of ammonia gases at your "treatment" system and at the city manhole adjacent to your property. There would be no way to enter the sewer without a breathing apparatus and protective clothing. This condition cannot be tolerated as we could have personnel in the sewer for maintenance or inspection. (See Sec. 33-39, paragrah (1) on page 5 of the enclosed booklet.) This excessive ammonia appeared to be a result of over neutralization of the waste in your surface run-off basin as the pH of the waste was 10.
- (3) We also found the following pH violations. (See Sec. 33-39, paragraph (f) on page 4 of the enclosed booklet.)
 - (a) 11-11-77 A.M. pH of 10 from surface run-off basin into city sewer.
 - (b) 11-16-77 A.M. pH of 4 being discharged on the southeast corner of your property. This waste enters a city storm sewer and eventually into a stream.

FOR HIS SAKE

AREA CODE 404/352-165€

and and

(c) 11-16-77 A.M. - pH of 0 was being discharged into the city sewer from a leaking valve on one fiberglass tank.

Hopefully the above conditions were corrected following our conversations. However, we feel any immediate action will only be temporary due the overall conditions of your process. Therefore, plans should be submitted to this office for a comprehensive treatment system. We will expect to hear from you before December 16, 1977. Failure to comply will necessitate action as explained in Section 33-35, paragraph c, page 1 of enclosed booklet.

Another area of concern is the surface drainage during a rain event. We intend to monitor the run-off at the next available instance. The storm water flowing to the southeast corner of your property enters a stream tributary to the Peachtree Creek. The State Environmental Protection Division of the Department of Natural Resources has been informed of this run-off as it may be in violation of their laws. The storm water flowing to the southwest corner of y your property enters a combination sewer system at the manhole adjacent to your treatment system. Should we find violations of City codes this waste will have to be treated. We understand the surface run-off sump is provided for this purpose, however, we feel the current design will not be sufficient. You will be notified of our findings in the near future.

As explained in our meeting there is damage to the manhole and possibly the sewer line to which you discharge. The City Sewer Maintenance Division will be assessing total damanges in the near future. Preliminary investigations indicate that the damages were caused by your operation and if confirmed N. L. Industries will be liable for repair cost.

If you have any questions please call.

Sincerely,

(Robert E. Hadden

ATLANTA, GEORGIA 30318

December 16,1977

Mr. L. H. Malone N.L. Industries, Inc. Box 7008, Station C Atanta, Georgia 30309

Dear Mr. Malone:

I have reviewed your letter of November 23, 1977 and find that the dates you propose are acceptable; however, recent monitoring data indicates that unacceptable waste is still being discharged. I must insist on complete control of this waste during the planning & construction period, or penalties will be assessed against the company.

Since my letter to you on November 21, 1977, we have checked the waste discharge during storm events. Based on this data almost all of the surface runoff was not within the allowable pH limits. Under present design the sump does not provide adequate treatment during storm events. On each inspection during dry weather we found the sump full, allowing no capacity for storm drainage to be stored and treated. Also, part of your run-off discharges to the east of your property where no treatment is available. Methods to correct these problems sould be included in your proposal.

It is essential that your temporary treatment methods provide a waste which does not violate city codes.

If you have any questions please contact me.

Sincerely,

Robert E. Hadden

Industrial Waste Inspector

> Re: N L Industries, Inc. Atlanta, Georgia Plant

Dear Mr. Hadden:

This responds to your recent letters of November 21 and December 16, 1977. N L has been carefully evaluating the matters you raised and appropriate solutions. I wish to assure you that we plan to improve both the existing waste water treatment system and the collections of potential runoff from the south area of the plant.

At this stage of our review I can confirm that with respect to Ph and ammonia control, NL has already replaced one fiber-glass treatment tank with a stainless steel tank and will install an additional stainless steel tank for neutralization and settling of waste water. Automatic controlling devices including a Ph recorder, level controls and automatic controls will be installed in a manner to protect the instrumentation from corrosion and permit adequate maintenance. All level controls, pumps, pipe and valves will be made of acid resistant material to ensure dependability. The system will also be capable of manual operation.

Two 3,000 gallon tanks will be placed to provide additional storage for the treatment collection system. As these collection tanks are filled, waste water will automatically be transferred to the stainless steel treatment tanks for subsequent treatment and disposal.

Plant: 6th Avenue & 41st Street, Altoona, Pa. 16602 Tel. (814) 946-1611 Plant: Penns Grove-Auburn Road, Pedricktown, N.J. 08067 Tel. (609) 299-6000

2/2/78

To assure capture of runoff from the plant, NL will install a sump and pumping system in the southeast corner of the plant and a similar sump and pumping system in the southwest corner. Waste waters collected in these sumps will be pumped to the neutralization tank for subsequent treatment if required.

Since the scope of the project and the necessity to install all facilities while the plant continues in operation will require an eight month period, NL respectfully requests the final completion date of September 29th of this year. During the interim period, NL will continue to ensure that the waste waters are properly treated and controlled through carefully monitored and supervised additions of ammonia to the newly installed stainless steel treatment tank.

Attached is a preliminary sketch of the proposed system which will improve our treatment collection capabilities.

Yours very truly,

N L INDUSTRIES, INC.

L. H. Malone

Area Production Manager

RE: NL INDUSTRIES, INC., ATLANTA, GEORGIA PLANT

Dear Mr. Hadden:

This will confirm our telephone conversation of February 22, 1978 regarding the waste water treatment system and the collection of potential runoff from the south area of the plant.

Subsequent to your review of NL's preliminary plans for the treatment system, you inquired about a review of engineering details. As we discussed, an engineer from the Division and the plant engineer will now start the detailed engineering and design required for this project. As these details become available, NL will provide them to you for review.

The target completion date is September 29th and during the interim period, NL will continue to insure that waste waters are properly treated.

If you have additional questions please call me at (609) 448-3200, Ext. 312.

Very truly yours,

J. W. Wentz, Manager

March 6, 1978

CERTIFIED MAIL

J. LEONARD LEDBETTER
Division Director

Mr. L. H. Malone N. L. Industries, Inc. Box 7008, Station C Atlanta, Georgia 30309

Dear Mr. Malone:

This will acknowledge a meeting in your office and subsequent inspection of your plant by Mr. D. R. Allen on January 11, 1978. A sample of the discharge from your property was collected after a period of rainfall on January 6, 1978. Our analysis of that sample revealed that the discharge from your property contained 26 ppm lead and a pH of 2.3. On February 9, 1978, Mr. Allen met with Messrs. Weaver and Dick and collected additional samples of your discharge during dry weather, including separate samples from the discharge pipes at the rear of your property. The results of these analyses will help us to better define the source of the contamination and the quality of the continuous cooling water discharges and will be forwarded to you when available.

The acid collected from the decapping operation and rainfall runoff from the western half of your plant eventually discharges into the City of Atlanta sanitary sewer system. It is our understanding that you are in the process of upgrading the neutralization facilities treating this discharge. Runoff from the eastern half of your plant, as well as some cooling water discharges, enters the drainage ditch behind your property and eventually flows into the Chattahoochee River via Peachtree Creek. This surface runoff from your property, based on the results of the January 6 sample analysis, is contaminated to an unacceptable level and is being discharged in violation of the Georgia Water Quality Control Act and the Rules and Regulations for Water Quality Control (copies enclosed). It appears that the primary source of this contamination is the scrap storage pile where the battery contents are dumped prior to smelting. A significant amount of acid and dissolved lead from the batteries accumulates in this storage pile and is washed off your property by rainfall.

Since the U. S. Environmental Protection Agency has neither promulgated nor proposed effluent guidelines for the secondary lead smelting industry, this office has the legal responsibility of determining effluent limitations for your discharge. This office has maintained a policy of limiting heavy metals in effluents to 1.0 ppm. Accordingly, the following effluent limitations will apply to your discharge:

Lead

1.0 ppm maximum

pН

6-9

Mr. L. H. Malone N. L. Industries, inc. Page 2 March 6, 1978

It will be the responsibility of N. L. Industries to develop and implement a program, acceptable to this office, for complying with these limitations. Significant improvements can be realized by simply allowing more acid to drain into the acid collection tanks in the decapping operation. The city has expressed a willingness to consider diversion of the contaminated runoff to their city sanitary sewer system following pretreatment in your neutralization system. If it is not possible to eliminate the contamination at the source or divert the contaminated runoff to the city system, you must consider treatment of the contaminated runoff for neutralization and lead removal.

It is requested that you submit a schedule and conceptual outline of your plans for eliminating this contaminated discharge within thirty (30) days of receipt of this letter. We would welcome an opportunity to meet with your consultants or staff engineers to discuss this matter and, if you have any questions, please feel free to contact Mr. Allen at 404-656-4887.

Sincerely,

William M. Jernigan, P.E. Program Manager Industrial Wastewater Program

CHESTER J. FUNNYÉ, P.E.
Commissioner

Mr. F. M. Roach, Jr. P.E. Asst. Environmental Engineer Southern Railway System Mechanical Department 99 Spring St., S.W. Atlanta, Ga.

Dear Mr. Roach:

Re: 36" diameter reinforced concrete pipe storm sewer under Southern's main line track, between Mecaslin Street and Northside Drive, NW, Atlanta, Goeriga. File 40-15.42

With reference to your letter addressed to Commissioner Funnye, dated March 30, 1978, wherein you requested a statement of the City's position with regard to ownership of the subject storm sewer, please note the following.

Records on file in this office including the following; annual reports, easement files, plat files, field books and cadastral mapping contain no entry or reference to the sewer in question.

You will recall our discussion during our meeting in this office, wherein I pointed out that the area where the sewer is located was annexed into the City of Atlanta under the 1952 Plan of Improvement. Under the terms of the law, which authorized this annexation, it was required that Fulton County forward to the City of Atlanta all records as mentioned above, since our files contain no such records. It appears that Fulton County as well was unaware of its existence.

In February 1972 this department authorized emergency repair to a portion of the sewer in question, including that portion which passe under the railroad's main line track.

The repair was authorized by the City because of the emergency situation, the fact that we had ready access to a contractor having internal repair capability and because National Lead acknowledged responsibility for the damage and agreed to pay the related cost.

Mr. F. M. Roach, Jr. P.E. Page - 2
April 6, 1978

Records on file in this office show that payment was made for the cost of the work performed in the amount of \$5,265.00 as previously agreed to by National Lead Incorporated.

The absence of recorded data on file in this office related to the sewer in question indicates that it was placed on railroad property by the railroad and, therefore, would be the responsibility of the railroad.

I trust that this information is that which you were seeking. If we can be of any further help to you in any way, please do not hesitate to call on us.

Very truly yours

Robert C. Pace

Division Director

Mr. L. H. Malone N. L. Industries, Inc. P. O. Box 70008, Station C Atlanta, Georgia 30309

Dear Mr. Malone:

This will acknowledge receipt of your letter dated April 18, 1978. We are in agreement with your suggestion to schedule a meeting for the end of June when the detailed engineering design for upgrading your wastewater collection and treatment facilities is completed. However, it is necessary that we review your preliminary engineering concept before the design progresses too far. Copies of the February 2 and February 27 letters to the City of Atlanta were not enclosed in your letter and we have yet to receive any report of your proposal for collecting and treating the contaminated wastewater now being discharged to Peachtree Creek. We would appreciate receiving copies of the letters to the City of Atlanta or a separate letter describing your proposed upgrading.

Listed below are the results of the analyses of samples collected on February 9, 1978.

| Sample Location | <u>рН</u> | Total Lead (μ g/1 as lead) |
|---|-----------|---------------------------------|
| Apparent groundwater seepage from base of wall near rail- road tracks | 3.2 | 1,950. |
| Discharge from pipe at base of concrete wall near rail-road tracks | 6.6 | 2,280. |
| Discharge from pipe near middle of plant property | 7.1 | 1,540. |
| Discharge to culvert under Mecaslin Street | 4.7 | 4,050. |

These analyses show that even the dry weather discharges from your operations have some lead contamination. I trust that the source of contamination and treatment of both dry and wet weather discharges will be addressed in your proposal.

Mr. L. H. Malone
N. L. Industries, Inc.

Re: N L Industries, Inc., Atlanta, Georgia Plant

Dear Mr. Allen:

This is in response to your letter of April 27, 1978, concerning NL's plans to upgrade the wastewater collection and treatment system at the Atlanta plant. Copies of the February 2 and 27, 1978 letters to the City of Atlanta, which were inadvertently omitted from my April 18, 1978 letter, are enclosed.

The preliminary plan for the upgrading includes water collection sumps at the Southeast and Southwest areas of the plant. Wastewaters collected in these sumps will be pumped to a new and automated system for subsequent neutralization and lead removal if required, under both wet and dry conditions. NL is presently preparing detailed plans for this major undertaking and will submit these plans for your review prior to completion of the detailed engineering. We anticipate that these plans will be available in the near future.

Regarding the analytical data contained in the April 27th letter, NL is investigating the sources of the alleged discharges and will perform water monitoring to assist in its investigation.

Please do not hesitate to contact me if you have any further questions in the interim.

Yours very truly,

N L INDUSTRIES, INC.

Mr. Robert L. Hadden Industrial Waste Inspector City of Atlanta Bureau of Pollution Control 7440 Bolton Road, N. W. Atlanta, Georgia 30316

N L Industries, Inc., Atlanta, Georgia Plant

Dear Mr. Hadden:

This is in response to your letter of May 3, 1978 in which you advised NL of a recently-enacted municipal ordinance requiring not more than 1 mg/l of lead in the wastewater effluent of the above-referenced plant.

As John Wentz noted to you in a telephone conversation on May 15, 1978, NL's planned waste acid treatment system will also achieve major reductions of the lead content in the waste stream. NL believes that the 1 mg/l standard can be achieved by installation of this system. However, the precise amount of lead in the effluent cannot be known until the system is operational.

We will be pleased to review this matter along with our detailed construction plans with the appropriate personnel of your department. I want to assure you that NL is moving forward with its comprehensive project as expeditiously as possible.

Very truly yours,

LH Malone

L. H. Malone, Plant Manager

Re: N. L. Metals
Atlanta, Georgia

Dear Mr. Wentz:

This will acknowledge receipt of the two flow diagrams for the proposed wastewater collection and treatment system at your Atlanta, Georgia plant and confirm your subsequent telephone conversation with Mr. D. R. Allen on August 4, 1978. It is our understanding that all wastewater and runoff from the collection and treatment system will be pumped to the City of Atlanta sanitary sewer system and that duplex pumps will be provided in the two sumps shown on the drawings.

The drawings make no reference to the lead contaminated discharges noted in Mr. Allen's letter to Mr. Malone dated April 27, 1978. In Mr. Malone's response of May 15, 1978, he indicated that these discharges would be monitored to determine the source of contamination. The results of our sampling indicate that these discharges will need pH neutralization, for one discharge only, and removal of lead by treatment or source control.

It is requested that the final engineering drawings for your proposed system be forwarded to our office for review as soon as they are available.

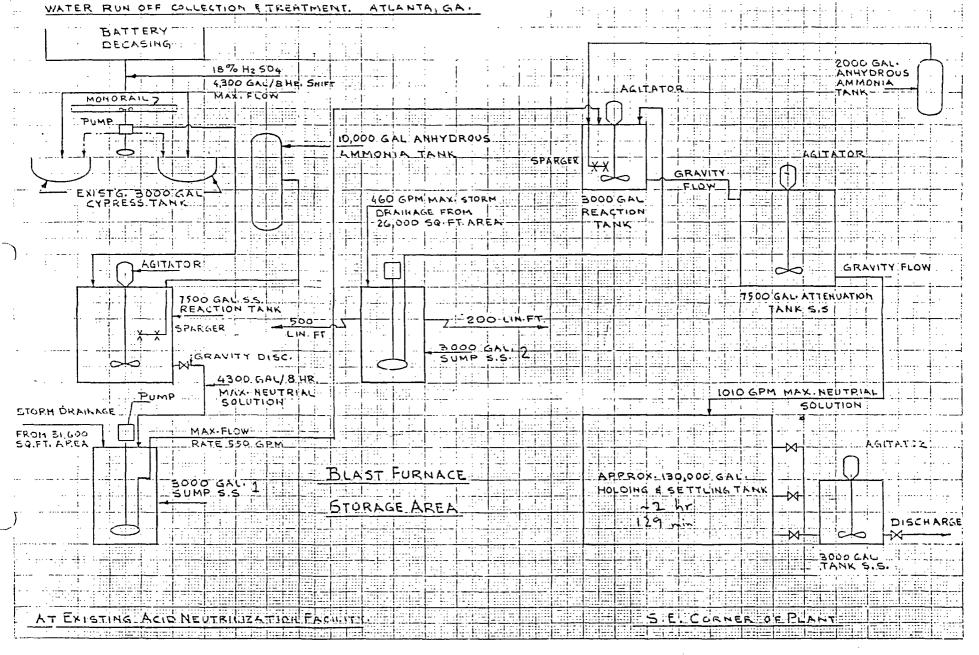

Sincerely,

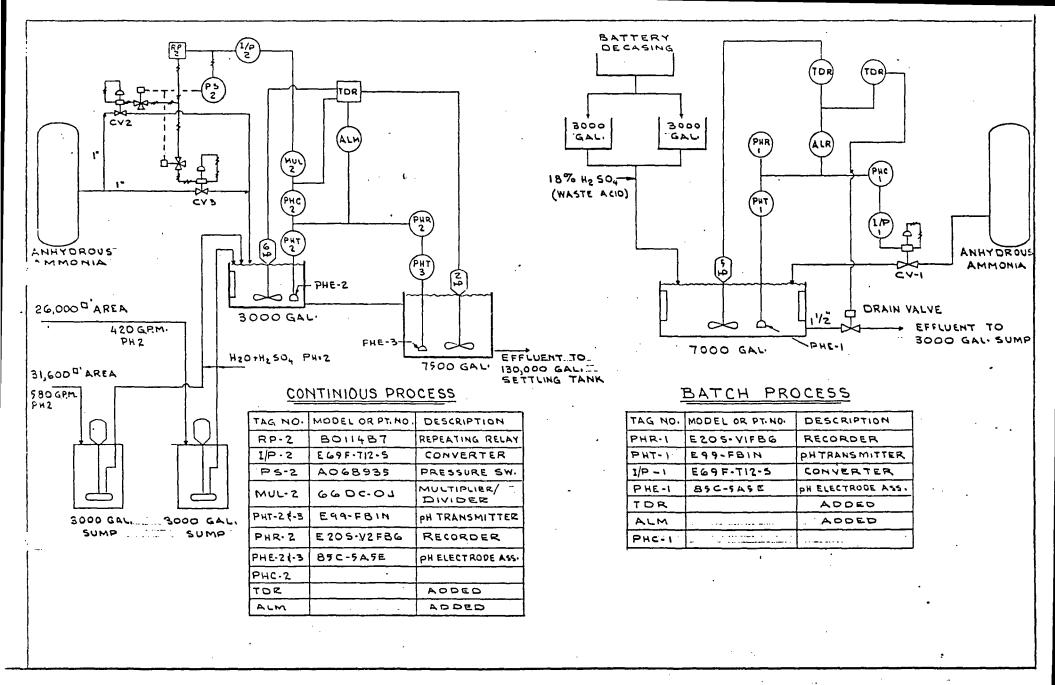

William M. Jernigan, P.E. Program Manager Industrial Wastewater Program

Dear Mr. Hadden:

Per our discussion today enclosed herewith is application for Industrial Sewer Connection. Drawings, specifications, and other items referred to as exhibits on the enclosed application are already in your possession. I will submit our plans for monitoring total discharge flow through the treatment system to you for your approval prior to installation of any flow monitoring equipment.

Thanks for the courtesies extended to Mr. Malone and myself during our visit to your office this morning. If you desire any further information relative to the collection and treatment of liquid effluent at our Atlanta, Georgia Plant, please let me know.

Sincerely,

N L INDUSTRIES, INC.

MEMORANDUM

TO:

FILE

FROM:

CLIFFORD S. ICE

RE:

SPILL - NATIONAL SMILTING AND REFINING (NATIONAL LEAD)

On November 30, 1982 at 9:30 A.M., Inspectors Michael Godbey, Harriet Bryant, and myself, Clifford Ice, responded to a "Spill Complaint" at National Smilting and Refining (Nat. Lead). This complaint was given to me by Bobby Hadden, Chief of Inspection & Monitoring. At his recommendation, I contacted Ms. Jillie Rackley (EPD) and Mr. Jim Cook of Emergency Management (659-6257) to get more background information.

Mr. Cook of Emergency Management related that a strong ammonia odor was reported to the Fire Department coming from the area of Deering Road and Loring Drive on the night of November 29, 1982. Ms. Rackley (EPD) concurred with this report, adding also that a high pH was present. Further investigation by Ms. Rackley revealed that National Smilting and Refining was the source. After investigation by National Smilting of their facilities, it was found that a malfunctioning probe was causing excess amounts of ammonia to be discharged. As a result of this finding, Ms. Rackley advised National Smilting to immediately cease discharging their industrial waste.

.

Upon our arrival on the morning of November 30, 1982, we found the holding tank to be overflowing and draining into the storm drain. This was further compounded by occasional rain falling into the open tank. We also found the sanitary sewer to which National Smilting discharged to be pouring directly into the storm drain at Deering and Loring. This line should have been discharging into the Deering Road interceptor.

After much discussion by Waldo Bennett, Ms. Rackley and officials of National Smilting, it was decided that National Smilting should continue to retain their discharge of industrial waste until a working probe was installed and the sewer line repaired.

AREA CODE 404/352-1656

By the afternoon of December 1, 1982, the ammonia discharge was corrected and the sewer line repaired by ${\tt DOT.}$

November 17, 1983

H.G. Granger National Smelting Co. 430 Bishop Street, N.W. Atlanta, Georgia 30318

Dear Sir:

On 9/19,20,21,22/1983 the industrial waste discharge to the sewerage system from National Smelting Co. was sampled in compliance with Section 9-5020 of the Atlanta City Code.

The following results are averages of the lab tests from the days shown above:

1. TSS - 71 above normal sanitary waste.
2. BOD - 0 above normal sanitary waste.

Based on these results, the Industrial Waste Surcharge per 100 cubic feet of water returned to the sewer is \$0.079. This charge went into effect on the water billing cycle that began <u>September 28, 1983</u>.

If you have any questions, please contact Clifford Ice at 352-1656.

Respectfully,

Clifford Ice

Industrial Waste Inspector

ATLANTA, GEORGIA 30377-0761

December 15, 1983

Mr. Ripwinkles National Smelting Company 430 Bishop Street, N.W. Atlanta, Georgia 30318

Dear Mr. Ripwinkles:

The enclosed Sampling Data Sheet will highlight several areas of concern that need to be addressed. Circled under Lab Results are the Cyanide and Lead concentrations. The Cyanide concentrations are high for 9/19/83 and out of limits for 9/22/83. The lead concentrations are out of limits from 9/19/83 to 9/22/83. The maximum daily allowable concentrations for these parameters are stated on page 9, Section 9-5008(b) of the City of Atlanta Water Pollution Control Ordinance, titled Limitations on Wastewater Strength.

Mr. Ripwinkles, it is important that we make plans to discuss these violations as soon as possible. The above dates reflect your effluent as of September. It is important however that this is not the case presently.

I will be waiting to hear from you by December 20, 1983. I can be reached at 352-1656.

Respectfully,

Clifford S. Ice

Industrial Waste Inspector

AREA CODE 404/352-1656

(a) Criteria to Protect the Treatment Processes and Receiving Water Quality. The maximum levels listed below are selected to protect the water pollution control facility and to protect receiving water quality. Discharges by users of the collection and treatment systems are limited such that specific pollutants at the influent to the water pollution control facilities do not exceed concentrations specified below.

| POLLUTANT | MAXIMUM DAILY CONCENTRATION, mg/l (24 hour Composite) |
|-----------------|---|
| Arsenic | 0.1 |
| Cadmium | 0.04 |
| Chromium (+6) | 0.2 |
| Chromium(total) | 1.2 |
| Copper | 0.5 |
| Cyanide | 0.34 |
| Phenol | 0.6 |
| Lead | 0.5 |
| Mercury | 0.004 |
| Nickel | 0.25 |
| Zinc | 1.0 |

discharge wastewater at such concentration or mass as to cause the influent to the water pollution control facility to exceed the limits listed in subsection (a) of this section. The limits on process discharges by the user listed below may be used as a guide in design and plant control, but may be altered by the Commissioner in the event of a discharge causing the influent to the water pollution control facility to exceed the specified limits of subsection (a) of this section or causing interference with water pollution control facilities. Allowable pollutant levels are provided as concentration limits and, for industrial users having discharges of less than 10,000 gallons per day (gpd), as mass limits.

| CONC | M DAILY ALLOWABLE ENTRATION, * mg/l hour Composite) | MAXIMUM ALLO MASS,* lbs/day, UNDER 10,000 | DISCHARGE |
|------------------|---|---|-----------|
| Arsenic | 1.0 | 0.083 | |
| Cadmium | 1.2 | 0.100 | |
| Chromium (+6) | 1.5 | 0.125 | |
| Chromium (total) | 13.0 | 1.084 | |
| Copper | 4.5 | 0.375 | |
| Cyanide | 4.0 | 0.334 | |
| Phenol | 15.0 | 1.251 | |
| Lead | 4.0 | 0.334 | |
| Mercury | 0.05 | 0.004 | |
| Nickel | 4.0 | 0.334 | |
| Zinc | 4.5 | 0.375 | |

MICHAEL L. SAPPINGTON, PRESIDENT

January 3, 1984

Mr. Clifford S. Ice City of Atlanta Bureau of Pollution Control P.O. Box 93761 Atlanta, Georgia 30377

Dear Mr. Ice:

I have interviewed the operating personnel at National Smelting and Refining Company, Inc. in order to try to determine the cause of the high lead results detected by the City of Atlanta during your recent sampling. Apparently sludge was being removed from the final polishing tank just prior to or during the sampling which began on September 19, 1983. Apparently a small amount of sludge was spilled into the sewer causing the elevated readings you encountered. NSR's sampling of the discharge tank revealed a lead level of 1.0 mg/l on September 19 and <1.0 mg/l on September 22, (results attached).

Sludge is only removed from the tank about once a year. The treatment plant operator has been instructed to make certain no sludge is spilled into the discharge tank in the future. Hopefully, this practice will insure that no further discharges will occur which are out of limits with applicable standards.

Please contact me if you have further questions in this matter.

Sincerely,

for National Smelting & Refining, Inc. LAKE ENGINEERING & DEVELOPMENT, INC.

January 10, 1984

Mr. Ripp Winkles National Smelting Company 430 Bishop Street, N.W. Atlanta. Georgia 30318

Dear Mr. Winkles:

I have received from Mr. Michael Sappington, President of Lake Engineering and Development, sample results taken from your discharge tank. These results are appreciated, however, they do not verify that sludge removal from the final polishing tank actually was the source that caused the high Lead and Cyanide concentrations for the period in question.

Please send to me the following information:

- 1. the exact dates of sludge removal,
- 2. the company responsible for sludge removal,
- amount of sludge removed,
- 4. location of where sludge was taken,
- 5. future dates of sludge removal.

This information should be submitted to this office every six months. It is important that this information is received by January 27, 1984. Resample consideration is dependent on this information.

I am looking forward to your continuing cooperation in assuring that the best possible representative sample can be taken of your effluent.

Respectfully,

Clifford S. Ice

Industrial Waste Inspector

Mr. David F. Cook, Vice President National Smelting & Refining Company, Inc. 451 Bishop Street, N.W. Atlanta, Georgia 30381

Dear Mr. Cook:

Enclosed is the proposed wastewater discharge permit for your facility at 451 Bishop Street, N.W. If you agree with the terms of the permit, sign the last page and return to me. Should you disagree, respond accordingly. Your response must be received by this office on or before February 15, 1985.

If I can provide additional information or service, please call.

Sincerely,

Robert E. Hallen

Robert E. Hadden, Chief Division of Inspection & Monitoring

THE NATIONAL SMELTING AND REFINING COMPANY, INC., 451 BISHOP STREET, N W. ATLANTA, GA 30381 • 404/876-7361
TELEX NO. 54-2870

Mr. Robert E. Hadden, Chief Division of Inspection and Monitoring Atlanta Bureau of Pollution Control P.O. Box 93761 Atlanta. GA 30377-0761

Dear Mr. Hadden:

We have received a draft copy of the wastewater discharge permit transmitted by your letter dated Feburary 1, 1985. We wish to comment on certain provisions and conditions of the draft permit and request that issuance of the permit be stayed until these matters can be discussed and resolved. Our comments are given in the following paragraphs.

Part II Schedule of Compliance

Item D of this part states the following:

On or before March 9, 1987, comply with the limitations of the Federal Pretreatment Standards for Nonferrous Metals Point Source Category. However, should the limitation provided in Paragraph C be more stringent, then the most stringent is the applicable limitation. A schedule of compliance in accordance with Section 9-5025(b) of the City ordinance must be submitted to this office within 60 days of the effective date of this permit.

Pollutant Limitations (PSES - Battery Cracking) (1)

| Parameter | Maximum for any one day | Maximum for monthly average |
|---------------|-------------------------|-----------------------------|
| Antimony | 1.299 | 0.579 |
| Arsenic | 0.936 | 0.384 |
| Lead | 0.189 | 0.087 |
| Zinc | 0.687 | 0.283 |
| Ammonia (asN) | 0.000 | 0.000 |

(1) Units: Mg/kg (pounds per million pounds) of lead scrap produced.

The pollutant limitations specified under item D are presently being litigated in the U.S. Court of Appeals, Fourth Circuit, Document No. 84-1659, entitled, "The Secondary Lead Smelters Association, Inc., Petitioner v. William D. Ruckelshaus, et al." Therefore, any reference in the permit to the federal pretreatment standards for the Nonferrous Metals Point Source

Mr. Robert E. Hadden, Chief February 15, 1985 Page Two

Category should include a statement indicating that the pollutant limitations are contingent upon the outcome of the court case.

We also wish to contest the inclusion of an ammonia limitation of zero in the draft permit conditions. Our entire wastewater pretreatment system is designed, constructed and operated based on the use of ammonia as the neutralizing agent. The requirement for no discharge of ammonia would require a costly redesign and retrofit of the entire system. Therefore, we request that the ammonia limitations be deleted.

In accordance with the comments stated above, we request that item D be reworded as follows:

D. On or before March 9, 1987, comply with the limitations of the Federal Pretreatment Standards for Nonferrous Metals Point Source Category in accordance with the resolution of Document No. 84-1659, U.S. Court of Appeals, Fourth Circuit, "Secondary Lead Smelters Association, Inc., Petitioner, v. William D. Ruckelhaus, et al." However, should the limitation provided in Paragraph C be more stringent, then the most stringent is the applicable limitation. A schedule of compliance in accordance with Section 9-5025(b) of the City ordinance must be submitted to this office within 60 days of the effective date of this permit.

Pollutant Limitations (PSES - Battery Cracking) (1)

| Parameter | Maximum for any one day (2) | Maximum for monthly average (2) |
|-----------|-----------------------------|---------------------------------|
| Antimony | 1.299 | 0.579 |
| Arsenic | 0.936 | 0.384 |
| Lead | 0.189 | 0.087 |
| Zinc | 0.687 | 0.283 |

- (1) These limitations are subject to change pending the resolution of current litigation.
- (2) Units: mg/kg (pounds per million pounds) of lead scrap produced.

We also would like to request that the method for obtaining the weekly lead sample be changed from 24 hour composite to either a grab sample or a one hour composite. This is due to the fact that we normally only discharge for one or two hours a day.

Mr. Robert E. Hadden, Chief February 15, 1985 Page Three

We certainly appreciate your consideration of these comments. Please contact me if further information or discussions are needed.

Sincerely,

NATIONAL SMELTING & REFINING CO., INC.

Allan P. Fields, Vice President National Smelting and Refining Company 451 Bishop Street, N.W. Atlanta, Georgia 30381

Dear Mr. Fields:

I am responding to your letter to Mr. Robert Hadden regarding your permit.

Your comments concerning the limitation being under litigations is well taken but have very little bearing in the issuing of this permit.

We cannot issue you a permit based on the possible outcome of these proceedings and be in compliance ourselves; for the City itself, must be in compliance as well as industry.

The limits set forth in your permit are established rules and regulations by EPA and until those rules are changed, we have no alternative. If and when these limitations are changed, we in return will be more than happy to change or reissue your permit accordingly. Item D then cannot be reworded.

The limit of (0.000) on ammonia (asN) is also a limit established by EPA and until that is changed by EPA, we cannot change that limitation. Therefore, we cannot delete the ammonia limitation.

The limitations standards are set on daily limits (24 hrs); a 24 hr. composite is the only way to determine whether or not you are in compliance with the required limits.

If your discharge is only for a 2' hour period per day, then you can only composite for 2 hours, but if there is discharge of 10 or 15 minutes throughout the day, your composite is from all of the periods through the day.

The compliance schedule submitted in your baseline report is unacceptable and a new one must be submitted by March 25, 1985.

Please remember that the compliance date still remains March 9, 1987 and until that date is changed, there is nothing we can do.

A schedule of compliance must be submitted to meet that date.

Thanks in advance for your cooperation.

Yours truly,

Waldo Bennett
